Digital Diagnostic Functions

SFP-10G-CWDM-DML-xxxx-40KM-x-G13 supports the 2-wire serial communication protocol as defined in SFF-8472. Digital diagnostic information is accessible over the 2-wire interface at the address 0xA2. Digital diagnostics for SFP-10G-CWDM-DML-xxxx-40KM-x-G13 are internally calibrated by default. The internal micro control unit accesses the device operating parameters in real time, Such as transceiver temperature, laser bias current, transmitted optical power, received optical power and transceiver supply voltage. The module implements the alarm function of the SFF-8472, alerts the user when a particular operating parameter exceeds the factory-set normal range.

DDM Threshold Information

Parameter	Alarm Threshold		Warning Threshold	
	High Value	Low Value	High Value	Low Value
Temperature (°C)	95 (5F 00)	-50 (CE 00)	90 (5A 00)	-45 (D3 00)
Vcc (V)	3.63 (8D CC)	2.97 (74 04)	3.46 (87 28)	3.13 (7A 44)
Bias (mA)	100 (C3 50)	2 (03 E8)	80 (9C 40)	4 (07 D0)
TxPower (dBm)	8.16 (FF FF)	-1.0 (1F 07)	8.0 (F6 77)	0.0 (27 10)
RxPower (dBm)	4.0 (62 1E)	-16.0 (00 FB)	3.0 (4D F0)	-15.0 (01 3C)

Notes:

1. According to domestic customer requirements, the temperature thresholds for commercial temperature and industrial temperature are defined as the same value.

real time. The host acquires this information over a 2-wire serial bus. The module dose not enable the suppression function of the receiver.

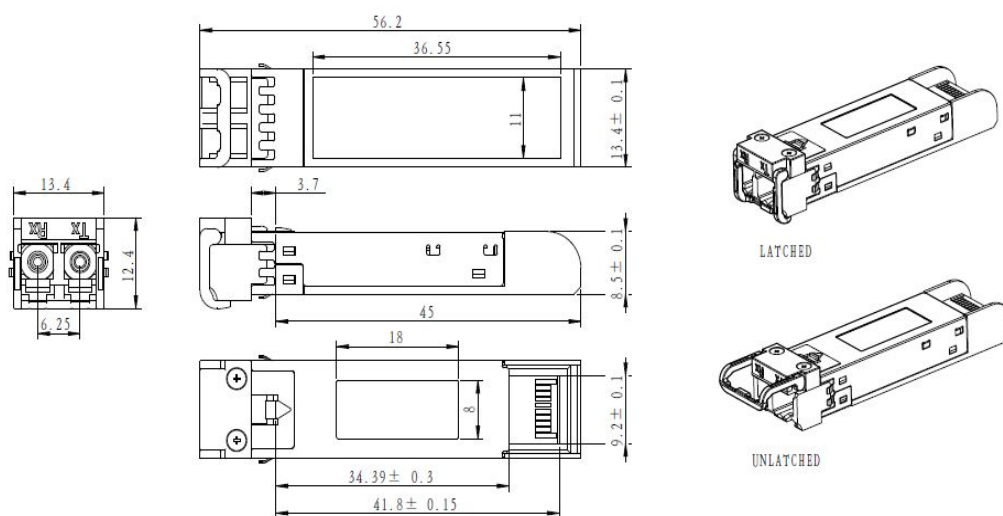

After the module is powered on, the read value of the security level access registers 7BH ~ 7EH of A2H is replaced with 0x00. After the content of this group of registers is updated, the read value is last wirtten value. The security level 1 password of this module is 0x00001011. The method to enter the security level 1 working state is to convert and write the security level 1 password in the A2H 7BH ~ 7EH registers of the module, namely 0x00, 0x00, 0x10, 0x11. After entering the security level 1 working state, the user can directly write to the contents of the A0H device address and Table 00 and Table 01 of A2H device address. And this version of the module does not support users to modify the security level 1 password.
