MODULETEK: SFP-OC3-SR0-x-D11

OC-3/STM-1 SFP (Small Form Pluggable) Transceiver

Overview

ModuleTek's SFP-OC3-SR0-x-D11 SFP optical transceivers are designed to comply with ATM/SONET/SDH standards at OC-3/STM-1 (155 Mb/s) . SFP-OC3-SR0-x-D11 with digital diagnostics monitoring functionality provide a quick and reliable interface for OC-3/STM-1 multimode application. In addition, they comply with the Small Form Factor Pluggable Multi-Source Agreement (MSA).

Product Features

- Up to 155Mb/s bi-directional data links
- Compliant with SONET and SDH for OC-3/STM-1
- Compliant with SFP MSA
- Hot-pluggable SFP footprint
- 1310nm FP transmitter
- Duplex LC connector
- Up to 2km on MMF
- Single power supply 3.3V
- RoHS Compliant
- Class 1 laser product complies with EN 60825-1
- Operating temperature range(case temperature):
 - Commercial Level : 0°C to 70°C
 - Industrial Level : -40°C to 85°C

Applications

- SONET OC-3 SR-0/SDH STM-1

Ordering Information

Part Number	Product ID	Description	Color on Clasp
SFP-OC3-SR0-C-D11	M356803	SONET OC-3 SR-0/STM-1 , SFP LC Connectors 1310nm MultiMode 2KM,commercial temperature	Gray
SFP-OC3-SR0-I-D11	M356804	SONET OC-3 SR-0/STM-1 , SFP LC Connectors 1310nm MultiMode 2KM,industrial temperature	Gray

Digital Diagnostic Functions

SFP-OC3-SR0-x-D11 supports the 2-wire serial communication protocol as defined in SFP MSA. Digital diagnostic information is accessible over the 2-wire interface at the address 0xA2. Digital diagnostics for SFP-OC3-SR0-x-D11 are internally calibrated by default. The internal micro control unit accesses the device operating parameters in real time, such as transceiver temperature, laser bias current, transmitted optical power, received optical power and transceiver supply voltage. The module implements the alarm function of the SFP MSA, alerts the user when a particular operating parameter exceeds the factory-set normal range.

DDM Threshold Information

Parameter		Alarm Threshold		Warning Threshold	
		High Value	Low Value	High Value	Low Value
Temp (°C)	C	75 (4B 00)	-5 (FB 00)	70 (46 00)	0 (00 00)
	I	90 (5A 00)	-45 (D3 00)	85 (55 00)	-40 (D8 00)
Voltage (V)		3.63 (8D CC)	2.97 (74 04)	3.46 (87 28)	3.13 (7A 44)
Bias Current (mA)		100 (C3 50)	2 (03 E8)	80 (9C 40)	4 (07 D0)
Tx Power (dBm)		-13.20 (01 DD)	-21 (00 50)	-14.00 (01 8E)	-20 (00 64)
Rx Power (dBm)		3.01 (4E 20)	-33.01 (00 05)	0.00 (27 10)	-30 (00 0A)

Parameter	Symbol	Accuracy	Units	Report Range		Unit	Remarks
Internal Calibration							
Temperature	Temp	±5	°C	-40	95	°C	
Voltage	V _{CC}	±0.1	V	2.7	3.9	V	
Bias Current	I _{bias}	±10	%	1	80	mA	
Tx Power	P _{TX}	±3	dB	-18	-5	dBm	
Rx Power	P _{RX}	±3	dB	-30	0	dBm	

Block-Diagram-of-Transceiver

Functions Description

The transmitter is mainly composed of a laser driver part of the intelligent transceiver chip and a TOSA (light-emitting component), the TOSA includes a 1310nm FP laser and a backlight photodetection chip, When the module is working, the input signal is connected to the intelligent transceiver chip, at this time, the laser driver of the intelligent transceiver chip supplies the bias current and the modulation current to the laser.

The intelligent transceiver chip simultaneously uses an automatic optical power control (APC) feedback loop to maintain a constant average optical power of the laser output. The purpose is to eliminate the change of the output optical signal due to temperature changes and aging of the light source device.

When the transmitter enable pin (TX_Disable) is high (TTL logic "1"), the laser output is turned off. When TX_Disable is low (TTL logic "0"), the laser will turn on within 1ms. When the transmitter fault signal (TX_Fault) is reported as high, indicates a transmitter failure caused by the transmitter's bias current or transmitted optical power or laser tube temperature exceeding a preset alarm threshold. Low indicates normal operation.

The receiver is mainly composed of a limiting amplifier part of the intelligent transceiver chip and a

ROSA (light-receiving component), the ROSA includes a PIN photodetector and a transimpedance amplifier chip. When the ROSA detects the incident light signal, it will be converted into a photo-generated current by the PIN photodetector. The photo-generated current is converted into an electrical signal after passing through the transimpedance amplifier. The electrical signal is further amplified by the limiting amplifier of the intelligent transceiver chip, then outputs a fixed-amplitude electrical signal to the host.

When the amplitude of the electrical signal received from the incident light conversion of the opposite optical transceiver module is lower than the set threshold, the module reports that the received signal is lost, the RX_LOS pin is high (logic "1"), which can be used to diagnose whether the physical signal is normal. The signal is operated in TTL level. The implementation method of RX_LOS is OMA (optical modulation amplitude).

The microprocessor inside the module monitors the module's operating voltage, temperature, transmitted optical power, received optical power, and laser bias current value in real time. The host acquires this information over a 2-wire serial bus.

A0h/A2h Write Protection

Security Level 1 Password:

Password Entry ADDR	Size	Vaules(hex)	Remark
Page A2h, 7Bh-7Eh	4	12 34 56 78	

After the module is powered on, the read value of the security level access registers 0x7Bh to 0x7Eh of A2h is replaced with 0xFFh.

After entering the security level 1 working state, the user can directly write to the contents of the A0h device address and Table 00h and Table 01h of A2h device address.

Product weight

The module of weight: 17.0 Grams of each

Dust cap weight: 0.95 Grams of each

Pin Assignment

PIN #	Symbol	Description	Remarks
1	V _{EET}	Transmitter ground (common with receiver ground)	1
2	TX_FAULT	Transmitter Fault. Not supported	
3	TX_DISABLE	Transmitter Disable. Laser output disabled on high or open	2
4	MOD_DEF(2)	Module Definition 2. Data line for serial ID	3
5	MOD_DEF(1)	Module Definition 1. Clock line for serial ID	3
6	MOD_DEF(0)	Module Definition 0. Grounded within the module	3
7	Rate Select	No connection required	
8	LOS	Loss of Signal indication. Logic 0 indicates normal operation	4
9	V _{EER}	Receiver ground (common with transmitter ground)	1
10	V _{EER}	Receiver ground (common with transmitter ground)	1
11	V _{EER}	Receiver ground (common with transmitter ground)	1
12	RD-	Receiver Inverted DATA out. AC coupled	
13	RD+	Receiver Non-inverted DATA out. AC coupled	
14	V _{EER}	Receiver ground (common with transmitter ground)	1
15	V _{CCR}	Receiver power supply	
16	V _{CCT}	Transmitter power supply	
17	V _{EET}	Transmitter ground (common with receiver ground)	1
18	TD+	Transmitter Non-Inverted DATA in. AC coupled	
19	TD-	Transmitter Inverted DATA in. AC coupled	
20	V _{EET}	Transmitter ground (common with receiver ground)	1

Notes:

1. Circuit ground is isolated from chassis ground
2. Disabled: T_{DIS} > 2V or open, Enabled: T_{DIS} < 0.8V
3. Should Be pulled up with 4.7k – 10k ohm on host board to a voltage between 2V and 3.6V
4. LOS is open collector output
